**Practice 7-3** Proving Triangles Similar

Explain why the triangles are similar. Write a similarity statement for each pair.

Algebra Find the value of  $x$ .

**Practice A** Congruent Triangles

Fill in the blanks to complete each definition.

- Corresponding \_\_\_\_\_ angles and \_\_\_\_\_ corresponding \_\_\_\_\_ sides are in the same position in polygons with an equal number of sides.
- Two polygons are \_\_\_\_\_ congruent polygons if and only if four corresponding angles and sides are congruent.

Refer to the figure of  $\triangle GHI$  and  $\triangle JKL$  for Exercises 3 and 4.

- Name the three pairs of corresponding sides.
- Name the three pairs of corresponding angles.

Given:  $\angle G \cong \angle J$ ,  $\angle H \cong \angle K$ ,  $\angle I \cong \angle L$

Find the value of  $x$ .

- Given:  $\angle DEF \cong \angle LMN$ ,  $x = 30$
- Given:  $\angle ABC \cong \angle PQR$ ,  $x = 5.5$

1. Explain this idea: When the side is being used, the full sides are used.

Given:  $\angle W \cong \angle V$ ,  $\angle X \cong \angle Z$ ,  $WY \cong VZ$

Prove:  $\triangle WYV \cong \triangle VZV$

Statements	Reasons
1. $\angle W \cong \angle V$	1. Given
2. $\angle X \cong \angle Z$	2. Given
3. $WY \cong VZ$	3. Given
4. $\triangle WYV \cong \triangle VZV$	4. ASA
5. $YV \cong ZV$	5. CPCTC

**Practice B** Congruent Triangles

In baseball, home plate is a pentagon. Pentagon  $ABCDE$  is a diagram of a regulation home plate. The base-ball rules are very specific about the exact dimensions of this pentagon so that every home plate is congruent to every other home plate. If pentagon  $FGHIJ$  is another home plate, identify each congruent corresponding part.

- $\angle D \cong \angle I$
- $\angle E \cong \angle J$
- $DE \cong IJ$
- $ED \cong JI$
- $DC \cong IK$
- $CB \cong HI$
- $BA \cong GH$
- $AE \cong FJ$

Given:  $\triangle GHI \cong \triangle JKL$  Find each value.

- $m\angle G = 100$
- $m\angle J = 100$
- $GI = 12$
- $JK = 12$

Given:  $\triangle GHI \cong \triangle JKL$ ,  $\angle G = 100$ ,  $\angle H = 40$ ,  $\angle I = 40$

Prove:  $\triangle GHI \cong \triangle JKL$

Statements	Reasons
1. $\angle G \cong \angle J$	1. Given
2. $\angle H \cong \angle K$	2. Third $\angle$ Theorem
3. $GI \cong JK$	3. Given
4. $\triangle GHI \cong \triangle JKL$	4. ASA
5. $HI \cong KL$	5. CPCTC
6. $GH \cong JK$	6. CPCTC
7. $GI \cong JK$	7. CPCTC
8. $HI \cong KL$	8. CPCTC
9. $\triangle GHI \cong \triangle JKL$	9. Det. of $\cong$ sides
10. $\triangle GHI \cong \triangle JKL$	10. Det. of $\cong$ angles

**Practice C** Congruent Triangles

It is an interactive process. We take pleasure in drawing a triangle and seeing if another person can recreate it using the same information. For each exercise, draw a diagram to support your answer. (Hint: Begin each exercise by drawing a triangle. Measure the parts of your triangle that Mr. X gave you and try to draw a different triangle with those parts. If the two triangles are congruent, you drew Mr. X's triangle.)

- Mr. X gave you the measures of the three sides of a triangle. Could you be sure you would draw Mr. X's triangle?  
Yes, possible answer.
- Mr. X gave you the measures of the three angles of a triangle. Could you be sure you would draw Mr. X's triangle?  
No, possible answer.
- Mr. X gave you the measures of one angle and two sides of a triangle. Could you be sure you would draw Mr. X's triangle?  
Yes, possible answer.
- Mr. X gave you the measures of one side and two angles of a triangle. Could you be sure you would draw Mr. X's triangle?  
Yes, possible answer.
- Mr. X gave you the measures of one angle, one adjacent side, and the side opposite the angle. Could you be sure you would draw Mr. X's triangle? (Hint: Draw  $60^\circ$  and a long adjacent side.)  
No, possible answer.

**Reteach** Congruent Triangles

Triangles are congruent if they have the same size and shape. Their corresponding parts, the angles and sides that are in the same position, are congruent.

Congruent Angles	Congruent Sides
$\angle A \cong \angle M$	$AB \cong MN$
$\angle B \cong \angle N$	$BC \cong NP$
$\angle C \cong \angle O$	$CA \cong OP$

Given:  $\triangle PQR \cong \triangle STU$  Identify the congruent corresponding parts.

- $\angle P \cong \angle S$
- $\angle Q \cong \angle T$
- $\angle R \cong \angle U$
- $PQ \cong ST$
- $QR \cong TU$
- $PR \cong SU$

Given:  $\triangle ABC \cong \triangle DEF$  Find each value below.

- $x = 21$
- $m\angle F = 52$
- $m\angle D = 110$
- $DE = 10$

**CPCTC PROOFS**

Note: Title

Given:  $\triangle ABC \cong \triangle DEF$

Prove:  $AB \cong DE$

1) $\angle A \cong \angle D$	1) Given
2) $\angle C \cong \angle F$	2) Vertical Angles
3) $BC \cong EF$	3) Given
4) $\triangle ABC \cong \triangle DEF$	4) ASA
5) $AB \cong DE$	5) CPCTC

The CPCTC theorem states that when two triangles are congruent, their corresponding parts are equal. The CPCTC is an abbreviation used for 'corresponding parts of congruent triangles are congruent'. What is CPCTC? The abbreviation CPCTC is for Corresponding Parts of Congruent Triangles are Congruent. The CPCTC theorem states that when two triangles are congruent, then every corresponding part of one triangle is congruent to the other. This means, when two or more triangles are congruent then their corresponding sides and angles are also congruent or equal in measurements. Let us understand the meaning of congruent triangles and corresponding parts in detail. Congruent Triangles Two triangles are said to be congruent if they have exactly the same size and the same shape. Two congruent triangles have three equal sides and equal angles with respect to each other. Corresponding Parts Corresponding sides mean the three sides in one triangle are in the same position or spot as in the other triangle. In the given figure,  $\triangle ABC \cong \triangle LMN$ . It means that the three pairs of sides and three pairs of angles of  $\triangle ABC$  are equal to the three pairs of corresponding sides and three pairs of corresponding angles of  $\triangle LMN$ . In these two triangles  $ABC$  and  $LMN$ , let us identify the 6 parts: i.e. the three corresponding sides and the three corresponding angles.  $AB$  corresponds to  $LM$ ,  $BC$  corresponds to  $MN$ ,  $AC$  corresponds to  $LN$ .  $\angle A$  corresponds to  $\angle L$ ,  $\angle B$  corresponds to  $\angle M$ ,  $\angle C$  corresponds to  $\angle N$ . And if  $\triangle ABC \cong \triangle LMN$ , then as per the CPCTC theorem, the corresponding sides and angles are equal, i.e.  $AB = LM$ ,  $BC = MN$ ,  $AC = LN$ , and  $\angle A = \angle L$ ,  $\angle B = \angle M$ ,  $\angle C = \angle N$ . CPCTC Triangle Congruence CPCTC states that if two triangles are congruent by any criterion, then all the corresponding sides and angles are equal. Here, we are discussing 5 congruence criteria in triangles. Criterion Explanation CPCTC SSS All the 3 corresponding sides are equal AAS 2 corresponding angles and the not included side are equal The other 2 corresponding sides are also equal SAS 2 corresponding sides and the included angle are equal The other 2 corresponding angles and the other 2 corresponding sides are also equal RHS / HL The hypotenuse and one leg of one triangle are equal to the corresponding hypotenuse and a leg of the other two corresponding legs and the other two corresponding angles are equal CPCTC Proof To prove CPCTC, first, we need to prove that the two triangles are congruent with the help of any one of the triangle congruence criteria. For example, Consider triangles  $ABC$  and  $CDE$  in which  $BC = CD$  and  $AC = CE$  are given. Follow the points to prove CPCTC  $BC = CD$  and  $AC = CE$  (Given)  $\angle ACB = \angle EDC$  (Vertically opposite angles are equal) Thus,  $\triangle ABC \cong \triangle EDC$ ; By SAS (side-angle-side) criterion Now the two triangles are congruent, therefore, using CPCTC,  $AB = DE$ ,  $\angle ABC = \angle EDC$  and  $\angle BAC = \angle DEC$ . Important Notes Given below are some important notes related to CPCTC. Have a look! Look for the congruent triangles keeping CPCTC in mind. Before using CPCTC, show that the two triangles are congruent. Related Articles on CPCTC Check out these interesting articles to know more about CPCTC and its related topics. Corresponding Angles Triangles Angles Congruence in Triangles Example 1: Observe the figure given below and find the length of  $LM$  using the CPCTC theorem, if it is given that  $\triangle EFG \cong \triangle LMN$ . Solution: Given that  $\triangle EFG \cong \triangle LMN$ . So, we can apply the CPCTC congruence rule to it which states that if two corresponding angles and the included side are equal in two triangles, then the triangles will be congruent. Here, two angles are given which are  $30$  degrees and  $102$  degrees such that  $\angle EFG = \angle LMN$  and  $\angle FEG = \angle MLN$ . So, by applying the CPCTC theorem we can identify that  $FE$  and  $ML$  are the corresponding sides of two congruent triangles  $\triangle EFG$  and  $\triangle LMN$ . Therefore,  $FE = ML$ . Hence, the length of side  $LM$  is  $3$  units. Example 2: The figure given below in which  $PR = RS$  and  $QR$  is perpendicular to  $PS$ . Find  $y$  using the CPCTC theorem. Solution: First let us prove that  $\triangle PQR \cong \triangle SQR$ .  $PR = RS$  (given)  $QR = QR$  (common side)  $\angle QRP = \angle QRS$  (as  $QR$  is perpendicular to  $PS$ ) Therefore,  $\triangle PQR \cong \triangle SQR$  (SAS criterion)  $PQ = QS$  (By CPCTC) Now as  $PQ = QS$  Therefore,  $4y = 28$  Answer  $y = 7$  units View More > go to slidego to slide Have questions on basic mathematical concepts? Become a problem-solving champ using logic, not rules. Learn the why behind math with our certified experts Book a Free Trial Class FAQs on CPCTC Yes, CPCTC is a theorem that says corresponding parts of congruent triangles are congruent. Corresponding means angles and sides that are in the same relative position in the two triangles. What is CPCTC for Similar Triangles? CPCTC for similar triangles is not true. So, we cannot apply the CPCTC theorem for similar triangles. Corresponding angles and sides of the two similar triangles are equal, whereas, corresponding sides of the triangles are not equal, but proportional. How do you Prove CPCTC? After showing the proposed triangles are congruent, we can immediately say that the corresponding parts of congruent triangles are congruent. It can be justified by superimposing triangles on each other and then by observing the corresponding angles and side lengths. What does CPCTC Stand for? CPCTC stands for corresponding parts of congruent triangles are congruent. Sometimes, it is also called CPCT which means corresponding parts of congruent triangles. What is an Example of CPCTC? The theorem CPCTC tells that when two triangles are congruent then their corresponding sides and angles are also said to be congruent. For example, triangle  $PQR$  are congruent triangles therefore according to the theorem the sides  $AB = PQ$ ,  $BC = QR$ , and  $CA = RP$ . Also  $\angle A = \angle P$ ,  $\angle B = \angle Q$ , and  $\angle C = \angle R$ . How do you Prove CPCTC Using SSS Criterion? In SSS triangle congruence all the three corresponding sides are equal. In other words, the two triangles are said to be congruent if all corresponding sides of one triangle are equal to the sides of another triangle. Thus, when two triangles are congruent then according to CPCTC all the corresponding angles are also equal. How do you Prove CPCTC Using SAS Criterion? In SAS triangle congruence the two corresponding sides and the included angle are equal. In other words, the two triangles are said to be congruent if two corresponding sides and the included angle are equal. Thus, when two triangles are congruent then according to CPCTC the other corresponding side and the other two corresponding angles are also equal. This booklet is perfect for keeping students engaged while practicing proofs. It fits perfectly in an interactive notebook. This foldable has six CPCTC proofs. It is intended for use in a congruent triangles unit. Two versions of the foldable are included for differentiated instruction. All of the proofs are fill-in-the-blank proofs. This foldable must be copied double sided. Assembly instructions and a complete answer key are included. Make sure this is appropriate for your students. Look at the product preview to make sure this fits within your curriculum. This is also part of the following bundle: Geometry Foldables - a growing bundle.
